Save lots of time on changes

- + bring down time spent on tracking changes and understand what and why
- + free resources from your valuable IT employees to e.g. run projects
- + avoid remarks in your IT audit report
- + save money for the company by having an updated IT change list

Figaf Integration Regression Tool™

Record live messages

Simple way of saving live messages and their output for test cases

Setup test scenarios

Use your existing ICOs to run the tests

Run tests

Running regression tests with the recorded message on test system

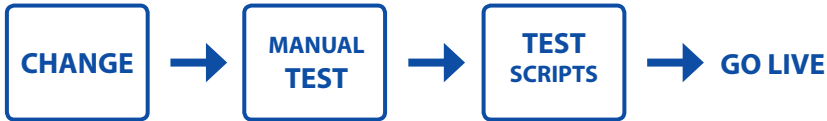

Verify

Verifying that the original messages correspond to the test run

BEFORE:

AFTER:

When you change a mapping or apply a support package you can test your full scenario with IRT. This ensures you are not introducing any errors.

Unique extra features

- B2B add-on: Handle splitting of messages
- Support comparison of XML/EDIFACT/X12 messages
- Synchronous and Asynchronous testing of messages
- Manual file upload to integrate with other gateways
